ALTERNATIVE PRODUCTS: THREE ISOFORMS (VEGF-190, VEGF-146 AND VEGF
166) ARE PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME
GENE. THE LONGER FORM CONTAINS A BASIC INSERT WHICH ACTS AS A CEI
FINITION SIGNAL.

TISSUE SPECIFICITY: ABUNDANTLY AND EQUALLY EXPRESSED IN HEART AND
LIVER. IN KIDNEY GLOWERULI, BRAIN AND YOLK SAC, VEGF-166 FORM IS
5- TO 10- TIMES MORE ABUNDANT THAN THE VEGF-190 FORM.

DEVELOPMENTAL STAGE: THE VEGF-166 FORM IS DEVELOPMENTAL STAGE: THE VEGF-166 FORM IS DEVELOPMENTAL STAGE: THE VEGF-167 FORM IS UPGRADED DURING GRASTRULATION. EXPRESSION OF THE VEGF-190
FORM IS DETECTABLE ONLY FROM DAY 2.

SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.

C;Comment: This factor is a mitogen, that is selective for endothelial cells,
are endothelial growth factors 167 and VEGF 186.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C;Date: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 05-Nov-1999 C;Accession: JC4680 .

VEGF-3 REMAINS CELL-SURFACE
HEPARIN.

-I- ALTERNATIVE PRODUCTS: THREE FORMS (VEGF-1, VEGF-2 AND VEGF-3) ARE
PRODUCED AS A RESULT OF ALTERNATIVE SPLICING OF THE SAME GENE. THE
LONGEST FORM (VEGF-3, SHOWN HERE) CONTAINS A BASIC INSERT LINKED
TO CELL-ASSOCIATION/HEPARIN-BINDING.

-I- TISSUE SPECIFICITY: IN DEVELOPING EMBRYOS, EXPRESSED MAINLY IN
THE CHOROID PLEXUS, PARAVENTRICULAR NEUROEPITHELIUM, PLACENTA AND
KIDNEY GLOMERULI. ALSO FOUND IN BRONCHIAL EPITHELIUM, ADRENAL
GLAND AND IN SEMINIFEROUS TUBBLES OF TESTIS. HIGH EXPRESSION OF
VEGF CONTINUES IN KIDNEY GLOMERULI AND CHOROID PLEXUS IN ADULTS.

STMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DISULFID DISULFID DISULFID DISULFID DISULFID CARBOHYD
